

This simple guide to buying a used car shows you what to check for and how to get the best deal

## BENEFITS OF BUYING USED

### Lower price

Buying a used car is more cost-effective than buying a brand-new car

### Wider selection

As used cars are cheaper than brand-new cars, you widen the number of cars to choose from

### Avoid depreciation

In the first two years of ownership, a new car will lose about 30% of its original value

### Resale value

If you sell your used car in a few years, you will lose less money on the resale than if you had bought it new

## 1 RESEARCH

### Set a realistic price range

Include **insurance** and **repairs**, plus **features** you need

You don't want to be stuck with monthly payments you can't afford

Only look for **makes** and **models** that fit into your price range

### Figure out what kind of car you need

| Your needs           | Compact                              | Sedan                                  | Van                                                | Truck                                                          |
|----------------------|--------------------------------------|----------------------------------------|----------------------------------------------------|----------------------------------------------------------------|
| People hauling       | Up to 4                              | Up to 4                                | More than 4                                        | 2-4 people                                                     |
| Stuff hauling        | Books and takeout                    | Groceries and a few boxes of stuff     | Lots of people and stuff on a regular basis        | Work tools, equipment or pulling a trailer                     |
| Driving/fuel mileage | Lots of highway driving or commuting | Mix of around town and highway driving | Around town with the occasional long distance trip | If you drive and tow equipment a lot, consider a diesel engine |
| Four-wheel drive     | Rarely                               | Some                                   | Some (all-wheel drive)                             | Yes                                                            |

### Get pre-approved for financing

If you don't have the cash to buy your used vehicle outright, you'll need to get an **auto loan**

Being **pre-approved** for an auto loan from your **credit union** is a good idea

You'll know how much you can spend, which will give you some **negotiating power** with a dealer or used car lot, as they'll know you are serious

### Find your vehicle

Visit the manufacturers' websites to find a model you like

Visit websites that research and investigate vehicles for consumers to find out all you can about the vehicle you like—try **consumerreports.org**, **edmunds.com** and **kbb.com**

Visit your local dealer, used car lot or classified ads and start tracking that vehicle down

## PRIVATE SELLER

vs.

## DEALER OR USED CAR LOT

### ADVANTAGES

#### Great deals

When you buy directly from a person, you can often find a really good deal

#### Less intimidating negotiations

Negotiating can be less intimidating because you're working with a regular person, not a highly trained sales professional

#### No unnecessary costs

Dealerships often try to charge for unneeded extras

#### Warranty

Most dealers offer a warranty, which will give you the peace of mind that the car that you're buying is in good working condition

#### Extras

Dealers will often throw in extra services for free that a private seller can't, like a free oil change

#### Trade-ins

Dealers take trade-ins, which can lower the amount you have to pay for the car you are buying

## 2 EVALUATE

### Before you start the car, give it an initial inspection

#### Inspect the exterior

Look for **offset doors** and **cracks** and **differences in paint color**, as this may indicate **body damage**—if you spot new paint, tap along the repainted areas; a change in the sound can reveal repairs and body work

#### Check the interior

Inspect the interior for wear and tear and water damage and check the **odometer**—if it shows low mileage but the inside of the car is disheveled, the car may not be what it appears to be

#### Look for rust

Check underneath the car for rust—a used car isn't structurally sound

#### Check the tires and wheels

Look for even tire wear—uneven wear could mean that the wheels or suspension are out of alignment

#### Look at the engine

If you see **rounded or stripped nuts and bolt heads**, it may indicate **shoddy repair work**; check for new **spark plugs**—it is a good sign that the car has undergone regular maintenance; make sure the **coolant** is clear and the **oil**, **transmission fluid** and **brake fluid** are all the correct colors

### Now, take the car for a test drive

Be sure to drive it cold—a cold engine will tell you a lot more than a warm engine will

#### Plan your route

Your test drive route should cover different types of roads—try to drive on highways, city streets and rural roads

#### Vary the terrain

Find a bumpy road to see how the car responds—if you feel like you're being thrown around, the shocks are likely worn out

#### Check the controls

Test the wipers, lights, turn indicators, stereo, and the heat and air-conditioning controllers

#### Check the brakes

Find an empty road, accelerate and hit the brakes hard—if the car pulls to one side, there may be a loose caliper

#### Check the gearbox

Gears should shift smoothly—if you hear any grinding noises, there is likely something wrong with the transmission

#### Check the alignment

While driving, momentarily take your hands off the steering wheel to see if the car pulls to the left or right

### VEHICLE HISTORY REPORT

Get a comprehensive report of the vehicle's history—these reports often cost money, but they are worth it

For no charge, **carfax.com** will show you how many records are available for a specific Vehicle Identification Number (VIN); however, if you want to view the records, there is a charge

## 3 NEGOTIATE

### You've found a car you're happy with and now you want to buy it

Remember, dealers don't just make their money on the selling price

#### Front end

Dealers make money on the front end by selling the car for more than what they paid for it

#### Back end

Dealers make money on the back end by selling financing, extended warranties and add-ons like rustproofing

#### Trade-in

If you have a trade-in, dealers make money on the difference between what they pay you for your car and what they get when they sell it

### It's time to negotiate

Dealers build about 20% gross margin into the asking price of the used car

#### Research the price

Find out what the going price is in your area for the type of car you want—check out classified ads in the paper or online to get an idea of prices

#### Make an offer

Offer 15% below the asking price—tell the salesperson that you know there's about 20% gross margin in the price and that you want him or her to make a profit

#### Turn down add-ons

If you're buying a used car from a dealer and they try to sell you add-ons, just say no—you can likely find a cheaper source elsewhere

### Be prepared to walk away

In any negotiation, be ready to walk away—be flexible in your choice and don't get too attached to one car
